COMBINED SCIENCE

0653/22

Paper 2 Multiple Choice (Extended)

February/March 2025

45 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- Take the weight of 1.0 kg to be 9.8 N (acceleration of free fall = 9.8 m/s^2).

INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

This document has **16** pages. Any blank pages are indicated.

- 1 Which characteristic of living organisms describes the taking in of materials for energy, growth and development?
- A excretion
- B nutrition
- C photosynthesis
- D respiration
- 2 Which structures are found in bacterial cells but **not** in animal cells?
- A cell membrane and plasmids
- B nucleus and cytoplasm
- C nucleus and ribosomes
- D plasmids and cell wall
- 3 The diagram shows a plant cell in a concentrated salt solution.

Which row shows the net movement of water molecules and the effect on the plant cell?

	net movement of water molecules	effect on the plant cell
A	out of cell	becomes turgid
B	out of cell	becomes flaccid
C	into cell	becomes turgid
D	into cell	becomes flaccid

- 4 The graph shows the effect of pH on the activity of an enzyme.

Which label shows where collisions between enzyme and substrate are the most effective?

- 5 Carbon dioxide is needed for photosynthesis.

How many molecules of carbon dioxide are needed to make five molecules of glucose?

- A** 6 **B** 12 **C** 30 **D** 36

- 6 The diagram shows part of the human digestive system.

Which row identifies structure X, an enzyme secreted by structure X and the action of this enzyme?

	structure X	enzyme	action of enzyme
A	liver	amylase	converts proteins to amino acids
B	pancreas	amylase	converts starch to simple sugars
C	liver	protease	converts proteins to amino acids
D	pancreas	protease	converts starch to simple sugars

7 What is a function of the large surface area of root hair cells?

- A** to increase the uptake of mineral ions by active transport
- B** to increase the uptake of water by active transport
- C** to decrease the rate of transpiration by diffusion
- D** to decrease the uptake of oxygen by diffusion

8 Which row shows how blood is pumped out of the heart to the lungs?

	atria	ventricles
A	left atrium contracts	left ventricle relaxes
B	left atrium relaxes	left ventricle contracts
C	right atrium contracts	right ventricle relaxes
D	right atrium relaxes	right ventricle contracts

9 The diagram shows part of the breathing system.

Which row identifies structures P, Q, R and S?

	alveolus	capillary	plasma	red blood cell
A	P	Q	R	S
B	Q	R	S	P
C	R	S	P	Q
D	S	P	Q	R

10 Which molecule is broken down in aerobic respiration?

- A starch
- B glucose
- C glycogen
- D water

11 Which row describes structural adaptations of insect-pollinated and wind-pollinated flowers?

	insect-pollinated flowers	wind-pollinated flowers
A	the flowers have large, colourful petals	the anthers hang on long filaments outside the flower
B	the flowers have large, colourful sepals	the stigma is feathery and hangs outside the flower
C	the flowers have large, colourful petals	the anthers are on short filaments inside the flower
D	the flowers have large, colourful sepals	the stigma is sticky and is inside the flower

12 Which statement about consumers is correct?

- A They feed on other organisms to get their energy.
- B They make their own organic nutrients.
- C They only get their energy by feeding on producers.
- D They use energy from sunlight for photosynthesis.

13 Which methods can be used to conserve an endangered species?

- 1 captive breeding programmes
- 2 introducing a new species
- 3 monitoring species
- 4 protecting habitats

- A** 1, 2 and 3
- B** 1, 2 and 4
- C** 1, 3 and 4
- D** 2, 3 and 4

- 14 When a substance is heated, it absorbs energy and changes from a solid to a liquid.

Which statement explains how the absorbed energy causes the change from a solid to a liquid?

- A The energy decreases the average kinetic energy of the particles.
- B The energy increases the temperature of the substance.
- C The energy makes the particles move closer together.
- D The energy overcomes attractive forces between the particles.

- 15 Elements X and Y are among the first 20 elements in the Periodic Table.

Element Y has 9 more protons than X.

Which statement about these two elements **must** be correct?

- A They are both metallic elements.
- B They are in the same group of the Periodic Table.
- C They are in different periods of the Periodic Table.
- D The number of electrons in their outer shell differs by 9.

- 16 Which statement about sodium ions and chloride ions in sodium chloride is **not** correct?

- A They are strongly attracted to each other.
- B They both have noble gas electronic configurations.
- C They are arranged in a regular lattice.
- D They share pairs of electrons.

- 17 Which dot-and-cross diagram shows the outer-shell electrons in a molecule of carbon dioxide?

- 18 Calcium carbonate reacts with dilute hydrochloric acid to make calcium chloride, carbon dioxide and water.

What is the balanced symbol equation and correct state symbols for this reaction?

- A $\text{CaCO}_3(\text{s}) + \text{HCl}(\text{aq}) \rightarrow \text{CaCl}_2(\text{aq}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})$
- B $\text{CaCO}_3(\text{s}) + \text{HCl}(\text{l}) \rightarrow \text{CaCl}_2(\text{s}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{aq})$
- C $\text{CaCO}_3(\text{s}) + 2\text{HCl}(\text{aq}) \rightarrow \text{CaCl}_2(\text{aq}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{l})$
- D $\text{CaCO}_3(\text{s}) + 2\text{HCl}(\text{l}) \rightarrow \text{CaCl}_2(\text{s}) + \text{CO}_2(\text{g}) + \text{H}_2\text{O}(\text{aq})$

- 19 The apparatus shown is used to test a property of compound R.

The lamp does **not** light when the beaker contains pure water.

When compound R is dissolved in the water, the lamp lights.

Which row describes compound R?

	type of bonding	elements of compound R
A	covalent	a metal and a non-metal
B	covalent	non-metals only
C	ionic	non-metals only
D	ionic	a metal and a non-metal

- 20 Which label represents the activation energy for an endothermic reaction?

- 21 Which diagram shows apparatus correctly assembled to determine the rate of reaction between magnesium and dilute hydrochloric acid?

- 22** Information about some elements in Group I, Group II and Group VII of the Periodic Table is shown.

Group I element melting point /°C	Group II element melting point /°C	Group VII element boiling point /°C
lithium = 181 potassium = 63	beryllium = 1278 calcium = 839	fluorine = -188 bromine = 59

A metal halide is formed when a metal in either Group I or Group II reacts with a Group VII element.

The metal has a melting point of 769 °C.

The Group VII element has a boiling point of -35 °C.

What is the metal halide?

- A** sodium chloride
 - B** sodium iodide
 - C** strontium chloride
 - D** strontium iodide
- 23** Which statement describes a chemical test for water?
- A** Water boils at 100 °C.
 - B** Water turns blue cobalt(II) chloride pink.
 - C** Water turns blue copper(II) sulfate white.
 - D** Water turns red litmus paper blue.

24 Dyes J and K are analysed using chromatography.

Dye J contains coloured substances, P, Q and R.

Dye K contains coloured substances, S and T.

Which conclusions can be made using the chromatogram?

- 1 Dye K does **not** contain substance Q.
- 2 Dye J contains at least three substances.
- 3 The R_f of Q is less than the R_f of S.
- 4 R and T are different substances.

A 1 and 2 **B** 1 and 3 **C** 2 and 4 **D** 3 and 4

25 Which tests are used to identify the ions in aqueous iron(II) sulfate?

- 1 add acidified aqueous silver nitrate
- 2 add acidified aqueous barium nitrate
- 3 add aqueous sodium hydroxide

A 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only

- 26 The diagram shows a solid element dropped into a dish of water. The element catches fire and burns with a lilac flame.

What is the element?

- A copper
- B lithium
- C potassium
- D sodium

- 27 Carbon dioxide is a greenhouse gas.

Which statements describe why carbon dioxide leads to increased global warming?

- 1 Carbon dioxide absorbs thermal energy from the Earth's surface.
- 2 Carbon dioxide reduces the loss of thermal energy into space.
- 3 Carbon dioxide dissolves in water to produce acid rain.

- A 1 and 2 B 1 and 3 C 1 only D 3 only

- 28 On Earth, the acceleration of free fall is 9.8 m/s^2 .

On Mars, the acceleration of free fall is 3.7 m/s^2 .

The weight of a robot on Earth is 784 N.

The robot is taken to Mars.

What is the weight of the robot on Mars?

- A 21.6 N B 212 N C 296 N D 784 N

- 29 Four objects, P, Q, R and S, are moving.

The table shows the mass and speed of each object.

	mass / kg	speed m/s
P	1.0	4.0
Q	2.0	1.0
R	1.0	2.0
S	4.0	1.0

Which two objects have equal kinetic energies?

- A** P and R **B** P and S **C** Q and R **D** R and S
- 30 The solid block shown is made of a metal with density 7.0 g/cm^3 .

What is the mass of the block?

- A** 4.7 g **B** 8.6 g **C** 84 g **D** 420 g
- 31 A liquid evaporates.
- Which particles leave the surface of the liquid and what happens to the temperature of the remaining liquid?
- A** The less energetic particles leave and the temperature increases.
B The less energetic particles leave and the temperature decreases.
C The more energetic particles leave and the temperature decreases.
D The more energetic particles leave and the temperature increases.

32 Which statement explains why metals are good thermal conductors?

- A** Metals contain delocalised electrons that are free to move.
- B** Metal surfaces are shiny.
- C** The distance between metal atoms increases when the metal is heated.
- D** The nuclei of metal atoms are positively charged.

33 A student draws the diagram shown. The circles represent particles.

Which states of matter are represented in the diagram?

- A** gas and liquid only
- B** gas and solid only
- C** liquid and solid only
- D** gas, liquid and solid

34 The diagram represents a wave at one moment.

Which labelled arrows represent the amplitude and the wavelength of the wave?

	amplitude	wavelength
A	P	R
B	P	S
C	Q	R
D	Q	S

- 35** Which statement about longitudinal waves and transverse waves is correct?
- A** Longitudinal waves cannot travel in a vacuum, but some transverse waves can.
 - B** Transverse waves cannot travel in a vacuum, but some longitudinal waves can.
 - C** Particles in a transverse wave oscillate parallel to the direction of travel of the wave.
 - D** Particles in a longitudinal wave oscillate perpendicular to the direction of travel of the wave.
- 36** Which terms are used to describe the nature of sound waves in air?
- A** compressions and crests
 - B** compressions and rarefactions
 - C** crests and rarefactions
 - D** crests and troughs
- 37** What are the two types of electric charge?
- A** left and right
 - B** north and south
 - C** positive and negative
 - D** up and down
- 38** A charge of 12 C flows through a resistor in 5.0 minutes.
- What is the current in the resistor?
- A** 0.040 A **B** 2.4 A **C** 25 A **D** 3600 A
- 39** A $6.0\ \Omega$ resistor is connected in parallel with a $12\ \Omega$ resistor.
- What is the combined resistance of the two resistors in parallel?
- A** $0.25\ \Omega$ **B** $4.0\ \Omega$ **C** $18\ \Omega$ **D** $72\ \Omega$
- 40** Which reaction releases energy in a stable star?
- A** combustion of hydrogen
 - B** combustion of methane
 - C** nuclear fission of helium
 - D** nuclear fusion of hydrogen
