0653/22

Paper 2 Multiple Choice (Extended)

October/November 2025

45 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- Take the weight of 1.0 kg to be 9.8 N (acceleration of free fall = 9.8 m/s^2).

INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

This document has **16** pages. Any blank pages are indicated.

1 Four biological processes are listed.

- 1 egestion
- 2 excretion
- 3 nutrition
- 4 respiration

Which processes are characteristics of all living organisms?

- A** 1, 2, 3 and 4
- B** 1, 2 and 3 only
- C** 1, 2 and 4 only
- D** 2, 3 and 4 only

2 What are features of a palisade mesophyll cell?

- 1 a nucleus
- 2 a cell wall
- 3 chloroplasts

- A** 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only

3 Which process is described as the net movement of water molecules from a dilute solution to a concentrated solution through a partially permeable membrane?

- A** absorption
- B** evaporation
- C** osmosis
- D** transpiration

- 4 The graph shows how the activity of an enzyme varies.

What is the x-axis label for this graph?

- A enzyme activity
 - B pH
 - C temperature
 - D time
- 5 Which statement about photosynthesis is correct?
- A Chlorophyll transfers energy from light into energy in chemicals for the synthesis of carbohydrates.
 - B Chlorophyll transfers energy from light into energy in chemicals for the synthesis of carbon dioxide.
 - C Mitochondria transfer energy from light into energy in chemicals for the synthesis of carbohydrates.
 - D Mitochondria transfer energy from light into energy in chemicals for the synthesis of carbon dioxide.
- 6 Some nutrients that a football player eats before a match are listed.
- 1 carbohydrates
 - 2 calcium
 - 3 fats
 - 4 proteins

Which nutrients provide the football player with the most energy per 100 g during the match?

- A 1 and 2 B 1 and 3 C 2 and 4 D 3 and 4

7 Which description of physical digestion is correct?

- A the breakdown of food into smaller pieces with a chemical change to the food molecules
- B the breakdown of food into smaller pieces without a chemical change to the food molecules
- C the breakdown of large insoluble food molecules into small soluble food molecules
- D the breakdown of large soluble food molecules into small soluble food molecules

8 The diagram shows the alimentary canal and associated organs.

Which structure has the correct name and function?

9 Which type of plant cell has a large surface area to increase the uptake of water?

- A mesophyll
- B root cortex
- C root hair
- D xylem

10 Which factors are possible risk factors for coronary heart disease?

- 1 age
- 2 genetic predisposition
- 3 sex

A 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only

11 The diagrams show features of plant cells and viruses that are different and features that are common to both.

Which diagram is correct?

12 What happens to breathing in humans during exercise?

	depth of breathing	rate of breathing
A	increases	increases
B	increases	no change
C	no change	increases
D	no change	no change

13 The diagram shows a food web.

Which statement about this food web is correct?

- A** There is one producer and two secondary consumers.
- B** There are two producers and three secondary consumers.
- C** There are two secondary consumers and two tertiary consumers.
- D** There are three primary consumers and three secondary consumers.

14 The melting point of argon is -189°C and its boiling point is -185°C .

The temperature of a sample of argon is changed from -180°C to -187°C .

Which row describes the arrangement of the particles at -180°C and at -187°C ?

	particles at -180°C	particles at -187°C
A	far apart and randomly arranged	close together and randomly arranged
B	far apart and randomly arranged	close together and ordered
C	close together and ordered	close together and randomly arranged
D	close together and ordered	far apart and randomly arranged

15 Which diagram represents the lattice structure of sodium chloride?

16 In which molecule are 10 electrons used to form covalent bonds?

- A** C_2H_4
- B** CH_3OH
- C** CO_2
- D** N_2

17 The formula of an iron(III) ion is Fe^{3+} .

The formula of a sulfate ion is SO_4^{2-} .

What is the formula of iron(III) sulfate?

- A** FeSO_4 **B** Fe_3SO_4 **C** $\text{Fe}_2(\text{SO}_4)_3$ **D** $\text{Fe}_3(\text{SO}_4)_2$

18 Which reaction pathway diagram shows the activation energy for an exothermic reaction?

19 The graph shows the volume of carbon dioxide produced in a reaction.

At which time is the rate of reaction greatest?

20 Ammonia dissolves in water.

Which test shows that the solution has a pH of 9?

- A Blue litmus paper stays blue.
- B Red litmus paper turns blue.
- C Universal indicator turns green.
- D Universal indicator turns blue.

21 What is the method by which elements are arranged in the Periodic Table?

- A by nucleon number
- B by number of electrons
- C by number of neutrons
- D by number of protons

22 Which statement about Group I elements is correct?

- A Lithium and potassium are poor electrical conductors.
- B Potassium has a higher density than lithium.
- C Sodium and potassium are relatively hard metals.
- D Sodium reacts with water to produce a lilac flame.

23 Which mixture results in the displacement of a halogen?

- A $\text{Br}_2(\text{aq})$ and $\text{NaCl}(\text{aq})$
- B $\text{Cl}_2(\text{g})$ and $\text{KI}(\text{aq})$
- C $\text{I}_2(\text{aq})$ and $\text{KBr}(\text{aq})$
- D $\text{NaBr}(\text{aq})$ and $\text{KCl}(\text{aq})$

24 What is **not** a property of transition elements?

- A form coloured compounds
- B good electrical conductivity
- C high melting point
- D low density

25 How is an R_f value calculated in chromatography?

- A** $\frac{\text{distance travelled by substance}}{\text{distance travelled by solvent}}$
- B** $\frac{\text{distance travelled by solvent}}{\text{distance travelled by substance}}$
- C** $\frac{\text{distance from the baseline to the top of the paper}}{\text{distance travelled by substance}}$
- D** $\frac{\text{distance travelled by substance}}{\text{distance from the baseline to the top of the paper}}$

26 Which method describes how pure crystals of magnesium sulfate are obtained from pure aqueous magnesium sulfate?

- A** Filter the crystals from the solution and dry them between pieces of filter paper.
- B** Filter the crystals from the solution and heat them to dryness.
- C** Heat to dryness and leave to cool.
- D** Heat to remove some of the water and leave to cool and evaporate slowly.

27 Four statements about alkenes are listed.

- 1 They turn aqueous bromine from colourless to orange.
- 2 They are reactants in addition reactions.
- 3 They react with steam in the presence of an acid catalyst.
- 4 They react with hydrogen without a catalyst.

Which statements are correct?

- A** 1 and 2 **B** 1 and 3 **C** 2 and 3 **D** 3 and 4

28 The speed–time graph for the motion of a car is shown.

What is the distance the car travels while it is decelerating?

- A** 50 m **B** 100 m **C** 200 m **D** 500 m

- 29 A force of 2.0 N moves an object a distance of 40 cm in the direction of the force.

What is the work done by the force?

- A 0.20 J B 0.80 J C 5.0 J D 80 J

- 30 A chair has a weight of 80 N.

The chair has four legs, and each leg has a base area of 20 cm².

What is the pressure exerted by the chair on the floor?

- A 1.0 Pa B 4.0 Pa C 10 000 Pa D 40 000 Pa

- 31 Which statement is a reason why metals are better thermal conductors than plastics?

- A Metals contain delocalised electrons.
B Metals have high melting points.
C The forces between particles in metals are strong.
D The particles in metals are far apart.

- 32 A beaker of water is placed in front of an electric fan.

Which changes to the temperature of the water and the position of the beaker **both** result in a greater rate of evaporation of water from the beaker?

	temperature of water	position of beaker
A	decrease	further away from fan
B	decrease	nearer to fan
C	increase	further away from fan
D	increase	nearer to fan

- 33** A beaker of water is heated, and a convection current is formed in the water as shown in the diagram.

What happens to the water at point P?

- A** Its volume increases and its density decreases.
 - B** Its volume increases and its density increases.
 - C** Its volume remains the same and its density decreases.
 - D** Its volume remains the same and its density increases.
- 34** An image of an object is formed by a plane mirror.

Which row describes the characteristics of the image?

	type of image	size of image
A	real	same as object
B	real	smaller than object
C	virtual	same as object
D	virtual	smaller than object

35 Light passes through a glass block.

Which diagram shows the path taken by the light?

36 What is the speed of ultraviolet radiation in a vacuum?

- A** $3.0 \times 10^4 \text{ m/s}$
- B** $3.0 \times 10^6 \text{ m/s}$
- C** $3.0 \times 10^8 \text{ m/s}$
- D** $3.0 \times 10^{10} \text{ m/s}$

- 37 The circuit shows two identical lamps connected in parallel to a 12V power supply. The reading on the ammeter is 3.0 A.

What is the power transferred by **each** lamp?

- A** 4.0 W **B** 8.0 W **C** 18 W **D** 36 W
- 38 The circuit shown contains a $12\ \Omega$ resistor and a $6.0\ \Omega$ resistor connected in parallel.

What is the combined resistance of the two resistors?

- A** $0.25\ \Omega$ **B** $4.0\ \Omega$ **C** $9.0\ \Omega$ **D** $18\ \Omega$
- 39 What is the purpose of a fuse in an electric circuit?
- A** It acts as an extra resistor in the circuit.
- B** It keeps the current at a steady value.
- C** It keeps the voltage at a steady value.
- D** It protects the circuit from a current that is too large.

- 40 Which object is a dwarf planet?

- A** Mars
- B** Mercury
- C** Jupiter
- D** Pluto
